

Project Design Phase-I

Problem – Solution Fit Template

Date	15 september 2022
Team id	PNT2022TMID50683
Project name	Real Time River Water Quality Monitoring And Control System
Maximum marks	2 Mks

Issue - Arrangement Fit Layout:

The Issue Arrangement Fit basically implies that you dislike your client and that the arrangement you have acknowledged for it really takes care of the client's concern. It assists business people, advertisers and corporate pioneers with identifying personal conduct standards and perceive what might work and why

Reason:

- ☐ Tackle complex issues such that fits the condition of your clients.
- ☐ Succeed quicker and increment your answer reception by taking advantage of existing mediums and channels of conduct.
- ☐ Hone your correspondence and promoting system with the right triggers and informing.
- ☐ Increment contact focuses with your organization by finding the right issue conduct fit and building trust by addressing continuous disturbances, or pressing or expensive issues.
- ☐ Comprehend what is happening to further develop it for your objective gathering.

Problem-Solution fit canvas 2.0

Purpose / Vision

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) <small>Who is your customer? I.e. working parents of 0-5 y.o. kids</small> For those people who use river water as source for living.	6. CUSTOMER CONSTRAINTS <small>What constraints prevent your customers from taking action or limit their choices of solutions? I.e. spending power, budget, no cash, network connection, available devices.</small> A product is to be developed in such a way it continuously monitors the quality of water and takes values and initiatives to control river water quality. To prevent further health hazards and other infections, people need a change to consume a pure river water.	5. AVAILABLE SOLUTIONS <small>Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? I.e. pen and paper is an alternative to digital notetaking</small> Through fast sms, an dynamic messaging system can be created to deliver acknowledgements to each and everyone accurately. If they miss or they are unnotified of the message they can always view the values stored in the mobile app handled via cloud. With which they can notify others too.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS <small>Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.</small> The system is basically a real-time embeded system of WSN and raspberry pi which uses zigbee network. WSN is choosed because of its dynamic architecture of connecting multiple sensors (pH sensor, Temperature sensor .etc) zigbee has high efficiency and low power consumption for networking. Together can notify messages to public accurately.	9. PROBLEM ROOT CAUSE <small>What is the real reason that this problem exists? What is the back story behind the need to do this job? I.e. customers have to do it because of the change in regulations.</small> The only bottle neck we have is the cost efficiency. Since multiple sensor nodes involving quantized connectivity makes it an dynamic system and product of considerable cost. It continuously monitors river quality and replaces it with perfectly built control system.	7. BEHAVIOUR <small>What does your customer do to address the problem and get the job done? I.e. directly related: find the right solar panel installer, calculate usage and benefits; Indirectly associated: customers spend free time on volunteering work (I.e. Greenpeace)</small> User guide is available as blogs and comes in as manual in all languages. Else customer service is provided. In which customers can report their problem and can have a clear understanding and description of the product. If customer seems there is a problem with the system they can contact and can have it fixed with the authorities.
